p5 Virtualization Technical Support AIX 5L V5.3

<http://killexams.com/pass4sure/exam-detail/000-062>

- A. Virtual Ethernet
- B. Micro-Partitioning
- C. Virtual I/O Server
- D. Capped and uncapped partitions

Answer: C

QUESTION: 56

has two POWER5 servers. They want the two servers' virtual Ethernets to appear on the same IP subnet. Which of the following will connect the client virtual Ethernet adapters to the physical Ethernet switch connecting the two servers?

- A. Configure a Shared Ethernet Adapter on the Virtual I/O Server.
- B. Use the same virtual LAN ID on each LPAR.
- C. Set up IP routing through an LPAR on each system.
- D. Set up an IP firewall through an LPAR on each system.

Answer: A

QUESTION: 57

Which of the following functions is provided by the LPAR Validation Tool (LVT)?

- A. LPAR creation
- B. Proper card placement
- C. Application compatibility assistance
- D. Response time for applications

Answer: B

QUESTION: 58

has a two-way p5-520 that will be running three shared processor Micro-Partitions consuming 60 percent of system resources. Immediately prior to shipment, the customer discovered they need to run a fourth server that requires AIX 5L V5.2. Which of the following will satisfy this requirement?

- A. Change to a 4-way p5-550
- B. Use Capacity on Demand
- C. Configure a fourth logical partition
- D. Add memory to the configuration

Answer: A

QUESTION: 59

After creating a virtual Ethernet adapter in slot #3 of logical partition #5, the user needs to configure the adapter in AIX. Which of the following location codes matches this virtual Ethernet adapter?

- A. U9111.520.1000000-V5-C3-T1
- B. U9111.520.1000000-V3-C5-T1
- C. U9111.520.1000000-V5-C1-T3
- D. U9111.520.1000000-V1-C3-T5

Answer: A

QUESTION: 60

has purchased a 2-way p5-520 and would like to create three Micro-Partitions on the server. Which feature of Advanced POWER Virtualization would allow them to create the desired number of partitions?

- A. Virtual Ethernet
- B. Shared Ethernet Adapter
- C. Dedicated Processors
- D. Shared Processor Pool

Answer: D

QUESTION: 61

A hosting company recently purchased an IBM p5-570 to use in their data center. The company intends to use the server to run several different client workloads. Which of the following features of the IBM p5 servers addresses the need for the isolation of workloads?

- A. Workload Manager
- B. Support for AIX 5.3
- C. Logical partitioning
- D. 64-bit or 32-bit kernel support

Answer: C

QUESTION: 62

The workload requirement for a Web server running in Micro-Partitioned p5-550 has increased 300 percent over the past six months. The initial partition definitions assigned 0.5 processing units and one virtual processor to the Web server partition. Three months previously, an additional 0.5 CPU was added to the Web server partition. When the technical specialist attempted to allocate a further 0.5 CPU to this partition, no additional performance was achieved. Which of the following actions would most likely resolve the problem?

- A. Add another virtual Ethernet.
- B. Change the partition to be uncapped.
- C. Change the number of virtual processors to 2.
- D. Increase the amount of memory assigned to the partition by 300 percent.

Answer: C

QUESTION: 63

Which of the following steps should be done FIRST when deploying a Virtual I/O server on a p5-550, which will host three logical partitions a NIM server and two application servers?

- A. Create and install the NIM server
- B. Create and install the Virtual I/O Server
- C. Create and install the application servers
- D. Activate Advanced POWER Virtualization

Answer: D

QUESTION: 64

has encountered a problem on the HMC, which requires access to the root shell on the HMC. Which of the following is necessary to access the root userid on the HMC?

- A. Enable remote commands on the HMC Configuration menu, then use ssh to login to the HMC, enter su - root
- B. Login to the HMC as hscpe and run pesh, using a temporary password from IBM
- C. Login to the HMC as hscroot, then run pesh, using a temporary password from IBM
- D. Enable remote commands on the HMC Configuration menu, then telnet in as hscroot, enter su - root

Answer: B

QUESTION: 65

The database on a p5-570 Micro-Partition has grown and backups are not meeting the Service Level Agreement. There are several partitions using the Virtual I/O Server to access the storage array. The database backup has high CPU utilization while the others have low CPU utilization. What adjustment can the technical specialist make to ensure that the Service Level Agreement is achieved?

- A. Add memory to the database partition to improve response time.
- B. Add additional Host Bus Adapters to the server to improve IO throughput.
- C. Modify CPU allocations to favor the database partition.
- D. Increase CPU allocations to the Virtual I/O Server.

Answer: C

QUESTION: 66

has four pSeries servers in their data center and wants to deploy multiple Micro-Partitions. Which of the following data center servers can be used for this purpose?

- A. p5-520 running Virtual I/O Server
- B. p690 running AIX 5L V5.3
- C. p5-510 running AIX 5L V5.2
- D. p5-520 running two dedicated processor partitions

Answer: A

QUESTION: 67

with limited AIX skills has purchased a p5-520 2-way which will run Micro-Partitions. To reduce the initial cost of purchase, the customer will be sharing the system resources using a VIO server. The customer is concerned about managing the installation of the operating system. Which of the following should the customer perform?

- A. Use alt_disk_install to install AIX on all logical partitions.
- B. Configure the DVD as a desired resource on all partitions.
- C. Configure all resources as shared resources between all partitions.
- D. Create a separate NIM server to manage the installation of all partitions.

Answer: B
