QUESTION: 117

You set up an AD/NT server. What is the purpose of the administrator username and password?

- A. allows users to change their password on the NT device via the IVE.
- B. ALLOWS THE IVE TO QUERY THE AD/NT FOR GROUP NAMES FOR ROLE-MAPPING PURPOSES
- C. ALLOWS THE IVE TO CONNECT TO THE AD/NT DOMAIN AND SUBMIT CREDENTIALS ON BEHALF OF THE USERS.
- D. Allows the IVE to query the D/NT for available users so you can select their names from a list role-mapping purposes

Answer: B

QUESTION: 118

What is required to configure an AD/NT server to validate usernames?

- A. domain controller
- B. administrator name
- C. Kerberos realm name
- D. Allow trusted domains must be selected.

Answer: A

QUESTION: 119

What are two benefits of using SSL? (Choose two)

- A. SSL is an application layer protocol so it has no NAT or firewall transversal issues.
- B. Remote Access with SSL only requires a web browser on the client for basic access.
- C. SSL is a network layer protocol so it provides easy access to large numbers of users with minimal configuration.
- D. While SSL VPNs are more difficult to set up than IPSec VPNs, they are much faster and offer higher encryption rates than that of IPSec VPNs.

Answer: A,B

QUESTION: 120

What are two functions performed by the intermediation engine? (Choose two)

- A. Authorization This function insures users trying to access the IVE are who they say they are then forwards requests to the inside server using those credentials.
- B. Authorization This function insures users trying to access the IVE are who they say they are then intermediates requests to the inside server using those credentials.
- C. Transformer This function can modify the "chunked" data stream before it passes the data to the request handlers. Transformers modify internal URLs, HTML markup and scripts to refer to "virtual" URLs/markup/scripts sourced from the IVE appliance.
- D. Parser This function processes data streams into chunks that can be manipulated by the transformers.

Answer: C,D
