Veritas Cluster Server 5 for Windows(R) (STS)

<http://killexams.com/pass4sure/exam-detail/ST0-12W>

QUESTION: 87

Which two tasks can be performed to improve the overall fault tolerance of a Veritas Cluster Server cluster? (Choose two.)

- A. connect each system in the cluster to separate power sources
- B. mirror the OS disk of each system in the cluster
- C. connect a tape drive to each system in the cluster
- D. add a local disk array to each system in the cluster
- E. add CPUs to each node in the cluster

Answer: A, B

QUESTION: 88

What is recommended for the implementation of a high availability environment?

- A. redundant hardware on the cluster systems
- B. a minimum of two service IP addresses per host
- C. a minimum of 10GB of local disk space on each host
- D. an SNMP management application installed on shared storage

Answer: A

QUESTION: 89

When would a Veritas Cluster Server cluster NOT be considered highly available?

- A. when the application relies on services from another system external to the cluster
- B. when the application is a custom agent, rather than an enterprise agent
- C. when the application requires that another application already be online
- D. when clustering of the application is unsupported by the manufacturer

Answer: A

QUESTION: 90

You have just installed and configured Veritas Cluster Server on a two-system cluster using an automated method. Which command is placed in the gabtab file during configuration?

- A. gabconfig -c -x

- B. gabconfig -c -n 2
- C. gabconfig -x
- D. gabconfig -n 2

Answer: B

QUESTION: 91

Which configuration file is affected by changing the MAC address for any NIC?

- A. lltab.txt
- B. llhosts.txt
- C. gabtab.txt
- D. ethers.txt

Answer: A

QUESTION: 92

You want to validate operation after installing, configuring, and starting Veritas Cluster Server. Which two GAB ports should be shown as running? (Choose two.)

- A. a
- B. c
- C. h
- D. s
- E. v

Answer: A, C

QUESTION: 93

You are the administrator of an Exchange 2003 Veritas Cluster Server cluster. You need to add an additional storage group to distribute users more efficiently and reduce recovery and backup windows. You have placed the new storage group on volumes in a newly created disk group and you have created a separate volume for databases and logs. Which two resources are required to accommodate the new storage group? (Choose two.)

- A. MountV resource for each volume
- B. VMDg for each disk group
- C. Volume resource for each drive letter
- D. VMDg resource for each disk

E. MountV resource for each storage group

Answer: A, B

QUESTION: 94

Which two characteristics of an application must be defined in order for it to be clustered under Veritas Cluster Server? (Choose two.)

- A. the startup procedure
- B. the monitor procedure
- C. the shared disk procedure
- D. the effect of a reboot
- E. the use of TCP/IP for client communication

Answer: A, B

QUESTION: 95

You restart your cluster after maintenance and determine through the GUI that the cluster is in STALE_ADMIN_WAIT state. Which Veritas Cluster Server log file would assist you in determining the problem?

- A. engine_A.txt
- B. had.log
- C. stale_admin.txt
- D. error.log

Answer: A

QUESTION: 96

An extra e-mail address has been added to the Veritas Cluster Server notifier. However, e-mail is NOT being sent to the new address. What is the likely cause?

- A. The notifier was NOT restarted.
- B. hashadow was NOT restarted.
- C. The mailer process was NOT restarted.
- D. HAD was NOT restarted.

Answer: A

QUESTION: 97

You are manually creating a backup of the Veritas Cluster Server configuration files for a three- system cluster with a database agent. Which configuration files are different on each system and must be saved from each of the systems?

- A. the LLT configuration files
- B. main.cf
- C. the database types file
- D. the Veritas Cluster Server log files

Answer: A

QUESTION: 98

You are tasked with making an existing production system highly available with Veritas Cluster Server. You have already verified that the hardware is compatible with Veritas Cluster Server. You are now evaluating the software on the systems for Veritas Cluster Server compatibility. What must be verified for Veritas Cluster Server compatibility?

- A. the operating system version
- B. the volume management software version
- C. the NIC driver version
- D. the file system version

Answer: A

QUESTION: 99

You are designing a cluster to run on Microsoft Windows 2000 Advanced Server systems. What is the minimum service pack you must specify be installed on the systems?

- A. 2
- B. 3
- C. 4
- D. 5

Answer: C
